

# VP300 SOLID-STATE TRIGGERABLE VIDEO PLAYER

The VP300 is a compact, solid-state, CompactFlash memory, triggerable video player for haunted houses, theme parks, family entertainment centers, retail displays, queue lines, walk-through attractions, and themed restaurants. Load it with video and forget it, it's a workhorse!

- Video MPEG files are stored internally on a CompactFlash card, not a disc, so it triggers instantly and doesn't wear out.
- Plays any number of DVD quality MPEG video files, up to 8GB of total size (about 160 minutes of DVD quality video). Includes a 2GB CompactFlash card (enough for 40 minutes of video).
- Playback can be on a VGA monitor, S-Video, or standard composite video. Supports both NTSC (North America/Japan) and PAL (Europe) encoding.
- CD-quality stereo audio line-level output.
- Comes pre-programmed to support from 1 to 8 different triggers, each of which can activate a different video, plus it can play a looping video between trigger activations. Includes an 8-button trigger for manual activation. We offer optional pressure mat, beam sensor, motion detector, and infrared remote control triggers all wired and ready for the video player, or you can use your own normally-open triggers. Also, can simply play a single video repeatedly with no triggering.
